Contrôleur JComboBox

```
public void actionPerformed(ActionEvent e) {  
    JComboBox cb = (JComboBox)e.getSource();  
    String imageCategory = (String)cb.getSelectedItem();  
    model.updateImageList(imageCategory);  
}
```

Modèle JList

```
class Model {  
    public void updateImageList(String category) {  
        List<String> imageList=getImagePaths(category);  
        view.updateList(imageList);  
    }  
    private ArrayList<String> getImagePaths(String category) {...}  
}
```
